OnePatient Hub (OPH)

Installation Guide

Target audience: System Administrators, IT Infrastructure Engineers, Developers

1. System Overview & Architecture

OnePatient Hub is a modern interoperability health platform built using **Django** for backend services, a relational database (PostgreSQL/MySQL), and a responsive HTML/CSS/JavaScript frontend utilizing secure session management and role-based access control.

2. Prerequisites & Environment Setup

Ensure the following components are installed on your host server (Linux/Ubuntu recommended):

- **Python 3.10+**
- **pip** and **virtualenv**
- **PostgreSQL** or **MySQL Workbench** for production data management
- Git for repository deployment

3. Step-by-Step Installation Instructions

1. Clone the Repository:

```
git clone https://github.com/your-org/onepatient-hub.git
cd onepatient-hub
```

2. Create and Activate Virtual Environment:

```
python3 -m venv venv
source venv/bin/activate
```

3. Install Dependencies:

```
pip install -r requirements.txt
```

4. Configure Environment Variables (.env): Set up your secure keys, debug flags, and database credentials:

```
DEBUG=False
SECRET_KEY=your-secure-production-secret-key
DATABASE_URL=postgres://user:password@localhost:5432/onepatient_hub
```

5. Run Database Migrations:

```
python manage.py makemigrations
python manage.py migrate
```

6. Create Master Superuser (craigianxx):

```
python manage.py createsuperuser
```

Note: Set username to craigianxx to enable cross-facility master privileges.

7. Collect Static Files & Run Server:

```
python manage.py collectstatic
python manage.py runserver 0.0.0.0:8000
```
