OnePatient Hub (OPH)

User Guide

Target audience: Nurses, Clinicians, Front-Desk Healthcare Staff

1. Getting Started & Authentication

- **Logging In:** Navigate to the login portal, enter your assigned Staff ID and password, and select your stationed Healthcare Facility from the dropdown menu.
- **First-Time Login:** Staff accounts initialized by administrators require an immediate password update upon first entry via the password reset workflow.

2. Patient Management & Profiles

- **Patient Directory:** Access unified patient identity records searchable by National ID or OnePatient Hub ID (OPH-ID format like `ZW-9010-9289-0`).
- **Viewing Patient Profiles:** Inspect core demographic data, linked external identifiers from other health systems, and data sharing consent status.
- **Emergency Override:** In critical clinical scenarios where data sharing consent is restricted, authorized users can trigger an emergency data bypass with logged justification.

3. Clinical Visits & Journey Tracking

- **Logging Visits:** Record patient vitals (Blood Pressure, Temperature, Weight), diagnoses, and detailed treatment plans linked directly to consultation dates.
- **Patient Journey:** View the chronological, cross-facility timeline tracking a patient's registrations, visits, and clinical referrals across different provincial health centers.

4. Referrals & Notifications

- **Creating Referrals:** Seamlessly dispatch patients to specialist clinics (e.g., cardiology reviews) with custom clinical notes.
- **Notification Center:** Monitor incoming unread clinical referrals and get real-time status updates directly from your sidebar badge counters.
